A *polynomial function* is a function of the form

$$f(x) = a_n x^n + a_{n-1} x^{n-1} + \cdots + a_1 x + a_0,$$

where $a_i \in \mathbb{R}$ and $a_n \neq 0$. The *degree* of $f(x)$ is $\deg(f) = n$. The real numbers a_i are the *coefficients* of $f(x)$. The *leading coefficient* of $f(x)$ is a_n. The *constant coefficient* of $f(x)$ is a_0.

The *zeros* of $f(x)$ are the *real* and *complex* solutions to the equation $f(x) = 0$.

The *y-intercept* of $f(x)$ is the point $(0, f(0))$.

The *x-intercepts* of $f(x)$ are the points $(r, 0)$, where r is a *real* root of $f(x)$.

The *shape* of $f(x)$ is

(a) $+|+$ if n is even and $a_n > 0$;
(b) $-|-$ if n is even and $a_n < 0$;
(c) $-|+$ if n is odd and $a_n > 0$;
(d) $+|-$ if n is odd and $a_n < 0$.

Find the degree, leading coefficient, roots, intercepts, and shape of $f(x)$. Use the intercepts and the shape to sketch the graph of $f(x)$.

Hint: Guess a zero r via the Rational Zeros Theorem, find $f(x) \div (x - r)$, then factor.)
