

Good day to all of my AP Calculus AB students.
Your assignment for today is:

- Read today's responses, RCalABx0406.pdf. This has solutions to some of the most troubling of the multiple choice questions from yesterday's practice test.
- Work on homework assignment H0406, which is in AP Classroom. Answer on-line. Due tomorrow.
- After you have completed this, fill out the Daily Checkin:

0406 AP Calculus AB Checkin

For the remainder of our course, we will be reviewing for the AP Calculus AB Examination. This will be done through a combination of AP Classroom and assessments that I will create. Typically, I will assign two AP style or otherwise thought provoking free response problems.

Notice that the AP exam this year will be open book, open note, calculator available. Because of this, AP has decided that the exam will have *only* free responses questions for which no calculator is necessary. These are the types of questions we need to focus on, but we will have occasional multiple choice assessments.

Grading moving forward will occur as follows:

- There will be no more examinations in our course other than the AP examination. However, you may raise your exam score by filling in all of the checkins. Each checkin is worth 0.3 extra credit points toward your exam total.
- We will have one on-line quiz per week which will count towards your quiz score.
- We will have daily classwork/homework which will be graded on effort, some on-line through AP Classroom and some assessments I will make.
- BASIS will announce a new AP Final Grade Adjustment at some point in the future.

I will write solutions for the problems that give people trouble. Any specific questions will help me to help you; I will focus my responses on your questions.

Please feel free to send me a message any time on Microsoft Teams.

I will send out an invite for an optional class meeting at 9 AM on Wednesday. This is an opportunity for us to use a digital whiteboard to go over material.
