

I have posted my `Graph.java` together with the rest of my project. I had to rethink how I wanted to do `isTree` to never traverse and edge in the opposite direction. Check it out.

I have updated Project 35d. Please get the new version.

Your assignment for this weekend is to complete Project 35d by implementing the `Comparable` interface in `Vertex` and `Edge`, so that you can sort the lists. This will allow you to more easily determine if two graphs are equal.

Please contact me via Microsoft Teams if you have any comments, or would like a hint.

Good luck!
