AP CALCULUS AB Dr. Paul L. Bailey

Homework 0508h Friday, May 8, 2020

**Problem 1.** Functions f, g, and h are twice-differentiable functions with g(2) = h(2) = 4. The line  $y = 4 + \frac{2}{3}(x-2)$  is tangent to both the graph of g at x = 2 and the graph of h at x = 2. (a) Find h'(2).

(b) Let a be the function given by  $a(x) = 3x^3h(x)$ . Write an expression of a'(x). Find a'(2).

**Problem 1.** Functions f, g, and h are twice-differentiable functions with g(2) = h(2) = 4. The line  $y = 4 + \frac{2}{3}(x-2)$  is tangent to both the graph of g at x = 2 and the graph of h at x = 2.

(c) The function h satisfies  $h(x) = \frac{x^2 - 4}{1 - (f(x))^3}$  for  $x \neq 2$ . It is known that  $\lim_{x \to 2} h(x)$  can be evaluated using L'Hospital's Rule. Use  $\lim_{x \to 2} h(x)$  to find f(2) and f'(2). Show the work that leads to your answers.

(d) It is known that  $g(x) \le h(x)$  for 1 < x < 3. Let k be a function satisfying  $g(x) \le k(x) \le h(x)$  for 1 < x < 3. Is k continuous at x = 2? Justify your answer.
